***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 7-9, and 15-16, drawn to a radio receiver having an interference canceller, a frequency offset estimator, and a radio transmitter including a frequency controller to adjust the carrier frequency of a transmitted signal, classified in class 455, subclass 114.2, 296.
  - II. Claims 2, 10-14, and 17, drawn to a radio system comprising a phase difference measurement unit which measures the phase difference between the interference signal and a desired signal, and a transmitter having a controller for controlling the transmission power of the transmitted desired signal classified in class 455, subclass 276.1, 522.
  - III. Claims 3-6, drawn to a radio station comprising a receiver having an interference canceller, a frequency offset estimator, and an information signal generator to generate an offset information signal in a receiver (fig. 3) without needing a transmitter, classified in class 455, subclass 226.1, 203.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not similar for the reason as set forth above.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not similar for the reason as set forth above.

3. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02) and classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to applicant's representative, Bradley Lytle, on 6/30/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 2618

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
